Figures and references

Commands

- **Not** comprehensive
- Starting reference to show that \LaTeX isn't *that* scary
- Provide some tips & tricks
- Tons of useful \LaTeX tutorials by [Overleaf](#)

Why \LaTeX is cool

Some Important Person

May 13, 2022

What is L^AT_EX?

- From [Encyclopædia Britannica](#):

“TeX, a page-description computer programming language developed during 1977–86 by Donald Knuth, a Stanford University professor, to improve the quality of mathematical notation in his books.

Text formatting systems, unlike WYSIWYG (“What You See Is What You Get”) word processors, embed plain text formatting commands in a document, which are then interpreted by the language processor to produce a formatted document for display or printing. TeX marks italic text, for example, as *this is italicized*, which is then displayed as this is italicized.”

- L^AT_EX is the corresponding software package
- TeX consists of the greek letters τ , ϵ , χ , and is pronounced “lay-tech”

Commonly used syntax

<code>\usepackage{...}</code>	import a \LaTeX package in preamble
<code>\input{...}</code>	input \LaTeX code from another file in-place
<code>\include{...}</code>	insert \LaTeX code from another file on separate pages

comments	<code>% ...</code>
bold	<code>\textbf{...}</code>
<i>italic</i>	<code>\textit{...}</code> or <code>\emph{...}</code>
<u>underline</u>	<code>\underline{...}</code>
inline equations	<code>\$...\$</code>
block equations	<code>\$\$...\$\$</code> or <code>\[...\]</code>
“quotes”	<code>'...'</code> or <code>``...''</code>
...and many more!	<code>\ldots</code>

Dimensions and layout

Dimension	Description
pt	point, smallest unit of measure
in	inch (72.27 pt)
cm	centimeter
mm	millimeter
em	relative to current point size (e.g., for 11pt font, 1em = 11pt)
en	half the width of em

Command	Description
\vspace{...}	add vertical space
\hspace{...}	add horizontal space

Typesetting notes

- Extra spaces between words are ignored
- An empty line starts a new **paragraph**
- Two backslashes (\\\) **forces** a line break, but does not start a new paragraph (i.e., no indent)
- Periods with trailing whitespace are treated as **end of sentence**, which can be escaped by a trailing backslash (e.g., i.e.\\)
- Tilde (~) inserts **non-breaking whitespace**
- Adding an asterisk (*) after some environment names will hide their numbering (e.g., section*, figure*, equation*)
- Curly braces ({...}) may be used as blocks for formatting
