# Goals of this presentation

A  $\text{\LaTeX}$  Tutorial

2 of 29

- **Not** comprehensive
- Starting reference to show that  $\text{\LaTeX}$  isn't *that* scary
- Provide some tips & tricks
- Tons of useful  $\text{\LaTeX}$  tutorials by [Overleaf](#)

Why  $\text{\LaTeX}$  is cool

Some Important Person

May 13, 2022

# What is L<sup>A</sup>T<sub>E</sub>X?

- From [Encyclopædia Britannica](#):

“TeX, a page-description computer programming language developed during 1977–86 by Donald Knuth, a Stanford University professor, to improve the quality of mathematical notation in his books. Text formatting systems [...] embed plain text formatting commands in a document, which are then interpreted by the language processor to produce a formatted document for display or printing.”

- L<sup>A</sup>T<sub>E</sub>X is the corresponding software package
- TeX consists of the greek letters  $\tau$ ,  $\epsilon$ ,  $\chi$ , and is pronounced “lay-tech”

Unal Artan \*

August 24, 2021

## 1 Wavelet Analysis

Researchers began studying wavelets in the 30s, because of their inherent cuteness in comparison to waves.

### 1.1 Digression

Would that this were a whiteboard instead ...

---

\*Thank you to Natalie & Johann

# Commonly used syntax

`\usepackage{...}` import a L<sup>A</sup>T<sub>E</sub>X package in preamble  
`\include{...}` insert L<sup>A</sup>T<sub>E</sub>X code from another file in-place

comments	<code>% ...</code>
<b>bold</b>	<code>\textbf{...}</code>
<i>italic</i>	<code>\textit{...}</code> or <code>\emph{...}</code>
<u>underline</u>	<code>\underline{...}</code>
inline equations	<code>\$...\$</code>
block equations	<code>\$\$...\$\$</code> or <code>\[...\]</code>
“quotes”	<code>`...`</code> or <code>``...``</code>
...and many more!	<code>\ldots</code>

# Dimensions and layout

[Introduction](#)[Documents](#)[Lists](#)[Tables](#)[Math](#)[Figures and references](#)[Commands](#)

Dimension	Description
pt	point, smallest unit of measure
in	inch (72.27 pt)
cm	centimeter
mm	millimeter
em	relative to current point size (e.g., for 11pt font, 1em = 11pt)
en	half the width of em

Command	Description
\vspace{...}	add vertical space
\hspace{...}	add horizontal space

# Typesetting notes

- Extra spaces between words are ignored
- An empty line starts a new **paragraph**
- Two backslashes (\\\) **forces** a line break, but does not start a new paragraph (i.e., no indent)
- Periods with trailing whitespace are treated as **end of sentence**, which can be escaped by a trailing backslash (e.g., i.e.\\)
- Tilde (~) inserts **non-breaking whitespace**
- Adding an asterisk (\*) after some environment names will hide their numbering (e.g., section\*, figure\*, equation\*)
- Curly braces ({...}) may be used as blocks for formatting

# Lists

A  $\text{\LaTeX}$  Tutorial
